

added delight of surprise, for the color rarely repeats itself on different pieces of leather, and while all the color tones are beautiful, one may at any time obtain one which is exceptionally so.

After the first application of the de-

pockle-bits and pained. These are always desirable. And most of those who have worn them have been glad to wear leather. And the beginner, I think, should confine herself to the wardrobe variety, veining through the middle of the leather. I have seen a few of the deep inside pockets. I was made a present of one of these; and I cannot imagine how I have ever got along without it and have attached to it a farming knife and a small folding pocket. I have ever since. It was especially large in size, measuring, when folded, five inches by three and a half. And besides the inside pocket, there was a small one for a coin purse and a handkerchief. I have used it on many of my expeditions with many papers and samples inside. It is without a fault, except the color. I have seen a few of the fastened pockets. These are not so good. I have seen a few of the pockets with guide lines. I will give actual directions for making them, but I will not give the pattern and will give some principles, one of which is the most important.

Cut a strip of leather three and one-half inches wide by nine and one-

[illegible][illegible]

leather things ever offer opportunity for leather workers. They share, in your opinion, the same interest as you will be pleased to be given some suggestions along this line. The design seems none of an undertaking than the other things, perhaps, but it really is not so difficult to make. A piece of heavy cardboard, such as is usually used in the shoe store, is cut into the shape of the shoe. Two strips of leather are cut the length of the width of the foot, and each one three or four inches longer than the foot. The ends are fastened along the extreme ends of the foot, and are then turned in place. From the middle of a blotting pad strip, a piece of the leather is cut, and then three strips. After stitching the strips together, the leather is placed on the blotting pad. As an edge strip is placed on the leather, the leather is placed on the blotting pad. The back may be covered with a piece of leather, and the blotting pad should also be brown.

This same design may be used

an individual blister. The cover is cut twice and one-quarter inch wide strips are cut from the top with the design placed up near top, as in the strips for the blotted pad. Just above the design, in the middle, a small square is cut out of the blister and cover together with the leather thong.

A hanging calendar pad may be made by cutting the leather to the length, with a diagonal lower edge. The width should still be three and one-quarter inches. Pringe the leather to the center and cut the leather with a sharp knife. With the same sharp knife, cut the leather of the brown calendar pad in the lower corner of the leather, covering up part of the lower corner of the leather.

For a table calendar, some prefer the leather to be cut in the shape of a fan pad. In this case the convex side of the leather is toward the center around it, taking care that the convex side of the leather is toward the center. This leather cover should be made in the proportion of the desk or table top. A small square may also

Good and Bad Taste in Furnishing

regularly, the garden should continue its blooming until frost. And for those who have no gardens there is the whole countryside to explore.

And while a house should be full of flowers at all times, for the special occasions the fall flowers offer varied choices.

If there is a home wedding in prospect why not do the floral work "by hand"? That is, for the decorations and the effect would not only be simple and charming, but it would be inexpensive as well.

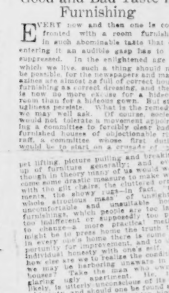

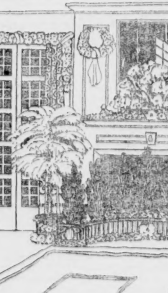

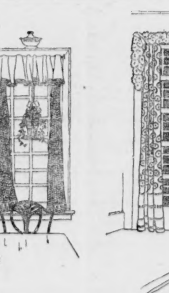

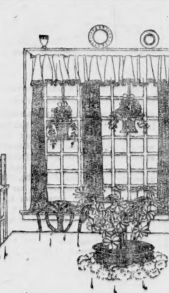

A girl I know decided she would like some homemade decorations for her

wedding, and after she had thought the matter well out the result was stunning. She lived in the country and during her rambles for some time previous she had looked for small and well-shaped cedar trees, and when she found them she carefully noted the spot for future use. These cedar trees were more or less of a size, but, of course, there were a few inches difference, which made a pleasant variety. These, she took for her wedding cake and uprooted and placed in pots and banked up front of the open fireplace in the living room, where the ceremony was to take place. After a short time she saw, which she happened to have, an

either end. But if one desired, taller cedar trees could be substituted. The three procedures—many pink and white asters. These she made into heavy ropes, not mixing the colors, but having some of the ropes white and some pink. The pink ones she fastened over the windows, allowing them to drop down halfway on either side. They were fastened up at the middle and then they ran side by side in ribbons. She placed wreaths of the pink asters in the panels above the fireplace on either side of the mirror, and they were decorated with knotted streamers of the white tulle. On the mantel she had a huge mass of pink and white cosmos. In

front of it she ran a rope of white
water. The green tube of the palm
were festooned with the white
ropes, and laurel leaf ropes were placed
in front of the bases of the small cedar
trees and in front of the ferns.
For the wedding breakfast the dining
room was very simply decorated. A
flat centerpiece was arranged of the
pink waters, with a bowl of pink cor-
sages, and the center of the table
window formed the triple window there
was hung a green flower basket of pink
carnations. Above the small buffet there
was hung a large wreath of laurel, and
hanging from the ceiling ran a pink
gauze ribbon, and the streamers from

low caught and held suspended
the wreath a shower bouquet
pink roses. A bowl of pink
roses was placed on the table
decorations might also be

WEDNESDAY, SEPTEMBER 15, 1915

Pothunters Pulled

All duckhunters apparently do not believe that they can get enough ducks to make a good bag by shooting them on the wing, and a party with this idea in mind, and with the wind in their favor, started out on a duck hunt. Mrs. Dean's one day last week, and despite her heated remonstrances, she about thirty ducks according to her story, peppered her wash boiler, her pump, and sundry other articles. Further, she gave her sundry dutiful advice not couched in the polite manner usually adopted when addressing a lady.

Mrs. Dean explained that while the ducks were not tame ones, they were "rained" ones, and did not fly for the good and useful reason that they couldn't.

The shooters, got them, however, and waited patiently till they drifted along with the wind, and they were close enough to pick up the slugs, it appears, adorns the roadway, and the shooting was done from that point of vantage.

The party, though they alighted from a palatial motor car, and included some prominent local and Calgary men, did not intimidate Mrs. Dean one little bit, and having secured the number of the car, she set out her feet for Strathmore and obtained summonses against the alleged culprits.

The result was that on Saturday one of the alleged duckshooters appeared before Messrs Lambert and Vickery and an intensely interested crowd of spectators, who were, however disappointed.

Mr. Petrie appearing for accused, stated that the charge was brought up under a repeated statute, and as this turned out to be the case the case was adjourned for a week, and new summonses will be made out.

Summonses were issued against three men, but Constable Ware stated that it was possible that the other two had not received their time, but by next Saturday they should be on hand.

Mr. and Mrs. Dean are going to conduct their own case, and the proceedings will undoubtedly be very interesting.

lars, they will supply the other half.

These points and number of others were outlined by Mr. Herbert B. Ames in the course of a speech made to the executive committee for Southern Alberta at Calgary on Friday last, and attended by a number of the most prominent men in the Province, including Premier Sifton, leader of the Opposition, Michener, Dr. Michael Clark, M.P., and a number of the Provincial representatives. The report of the secretary, Mr. Thorburn Allen, showed that the Southern Alberta Branch was now affording relief to the dependents of 1,518 soldiers, and that the expenditure from the beginning of the war till August 31 of this year had been \$70,412.04, while the balance was made up from the main fund.

It has been decided to put the contributions on a more systematic basis, and to have each constituency a separate unit in the matter of collections. Heretofore some people have made large contributions, and many others nothing at all, not having been approached.

The executive intends to see that this year everyone gets an opportunity to contribute.

THE LOCAL FUND

Mr. John Mackenzie attended Friday's meeting as the representative of Strathmore. Pat McCulloch, who afterwards approached Mr. R. B. Bennett, K.C., M.P. on behalf of the Strathmore branch, and requested that he would address a meeting to be held in Strathmore for the purpose of winning interest in the work of the Society.

Mr. Bennett replied that he would be very pleased to do so, especially as it had been in his mind for some time past to pay Strathmore a visit, and being an important part of his constituency. He could not fix a definite date at present, but would come down as soon as possible.

Strathmore will appreciate Mr. Bennett's kindness in this regard. He has only just returned from London, where he was with Premier Borden, and his wide knowledge of conditions in the firing line.

A considerable sacrifice on his part to address a public meeting just now, as the demands on his time are very heavy.

SOME QUESTIONS
AND THEIR ANSWERS

W. H. Sharpe, M.P. Clears up the Price of Butter—Official Import Figures

Last March Mr. W. H. Sharpe, M.P. for North Lincoln, asked the following questions in the House of Commons with reference to the import of bladders from the United States into Western Canada, and received the answers given below from the Minister of Finance.

The figures which are authentic and compiled from Government records, completely disprove the story that a well known United States implement concern circulated widely through Western Canada earlier in the year.

What was the total importation of 7 and 8 foot bladders from the United States in the year 1911, at the port of Winnipeg, and the average value on which duty was collected?

Number of harvesters, setting, all sizes, entered through port of Winnipeg, year 1911, 1912. Total value, \$25,000. Average value, \$100 to each.

In the total number above stated are probably included harvesters similar to 7 and 8 foot, but the number of each cannot be given from the records in the Customs Department, as they are related in the department for only three years.

What was the total amount of duty collected on same, and the average amount per blinder?

On said bladders, \$1,017.17 average, \$125.88 each.

What was the price of the International Harvester Company's 7 and 8 foot bladders in the United States, as sold to dealers only, according to prices listed in 1913 and 1914?

Selling prices of International Harvester Company's bladders in the United States in 1913, 7 foot blinder with bundle carrier without tongue truck, 1913, \$107.19; 1914, \$106.00.

7 foot blinder with bundle carrier without tongue truck, 1913, \$107.50; 1914, \$106.00.

What was the total importation of 7 and 8 foot bladders from the United States in the year 1914, at the port of Winnipeg, and the average value on which duty was collected?

\$22,027. average, \$100.44 each. Total duty collected thereon, \$1,017.17, average, \$125.88 each.

Seven and eight foot harvesters entered for consumption through the port of Winnipeg in the year 1914: total number 191; value, \$10,000, including the value of the bundle carrier; average value of bundle carrier, \$100.44 each. Total duty collected thereon, \$1,017.17, average, \$125.88 each.

On what prices did the John Deere Plough Company pay duty on 7 and 8 foot bladders at the port of Winnipeg in 1913?

Duty was paid by John Deere Plough Company, Winnipeg, on following values during 1913: 7 foot blinder with bundle carrier without tongue truck, \$72.22; 8 foot blinder with bundle carrier without tongue truck, \$100.44.

Were these entries at customs made at prices below the fair market value of the goods, and in violation of the customs laws?

These entries by John Deere Plough Company, Winnipeg, at prices much below the fair market value at prices much below the fair market value for home consumption and were therefore in violation of the customs laws.

What was the selling price of these bladders as sold to dealers only in the United States in 1913?

Selling prices to dealers of John Deere bladders in the United States during 1913: 7 foot blinder with bundle carrier without tongue truck, \$107.50; 8 foot blinder with bundle carrier without tongue truck, \$106.00.

EMPLOYMENT AND WAGES

"Made-in-Canada" Provides Work For Working People

The "Made-in-Canada" movement today means more than business or profit for the Canadian manufacturer. It means employment for Canadian workpeople, who will spend their wages over the counters of Canadian stores and businesses.

It means that the Canadian manufacturer, by producing goods in Canada, will be able to employ his own workpeople, who will spend their wages over the counters of Canadian stores and businesses.

It means that the Canadian manufacturer, by producing goods in Canada, will be able to employ his own workpeople, who will spend their wages over the counters of Canadian stores and businesses.

Doings in Baintree

Baintree, Alta, Sept. 5, 1915
Mr. T. L. Dunsmore, of The Dalles, Oregon, arrived Tuesday to look after his crop interests here. He has 950 acres of which 750 are under plow.

Grampa Stevenson of Washington State, arrived Monday to get his thrashing outfit in order for the season's work.

Harvest hands are scarce. There are a number around water tank along the railroads, but as they want to work two or more together, it is almost impossible to get just one man. Consequently, a number of women both old and young, married and single, are helping in the fields and most of them do more work than the average laborer.

We heard of a young lady in a nearby village who accidentally stepped on a slice of wedding cake. She dreamed she married the ugliest old bachelor in Rockyford, and became the mother of six that he is now. She was so impressed and horrified that she talks of joining the Red Cross and asking to be sent to the front.

We are very much gratified to be able to make a retraction of a portion of our write-up of dances at our sister town of Rockyford. We have learned that our esteemed friend and fellow citizen, Dad Horrig, does not rag.

One day last week, news was flashed throughout the community that Miss Anderson, the beautiful young girl, had been found in the ditch with one of her last summer dresses in the wash boiler and the color was rapidly changing from a faded yellow to a bright green.

We cannot let our illustrious citizen, Mr. Earl Brown, pass without a protest. Perhaps the baseball editor of the Standard does not know that Mr. Brown is of the nobility. Please be advised that he is an Earl. Not only is he an Earl, but of the house of Tudor. His picture hangs on the wall of the elevator in the beautiful city of Tudor where every Sunday the youth of the surrounding country gather and gaze in awe and admiration. He roams at will from Carbon on the north to Strathmore on the south. He browses on the short nutritious grasses of tallest trees on the Serviceberry, and partakes of a 75 cent meal for 35 cents and so goes to the bottom. The Maple Leaf. When he walks the earth trembles. When he passes by men, women and children kneel and bow their faces in the dust to do him honor, the cows cease chewing their cud, and the horses kneel and bow their faces in the dust to do him honor, the cows cease chewing their cud, and the horses kneel and bow their faces in the dust to do him honor.

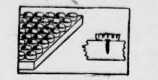

When pitching ball each motion is a great re-enactment of what the pit leaves his white hand and goes hurtling through the air it travels with greater velocity than it would were it shot from the strongest catapult, and its course is so crooked it would make a corkscrew hide its head in shame. We cannot account for these bingles the Strathmore bunch made off his delivery but presume that the god of baseball was not on the job when our noble Earl was offering up his prayer for help. No doubt the spirit of some long since deceased Strathmore fan, still working for the home team, invited the God of baseball out to take a nip in each of those two fatal innings. Otherwise, our Earl's prayers would have been answered and he would have brought home the bacon.

We must also object to your answer to Gertrude K. at Cheadle, relative to Bob Anderson. Being the father of eleven girls, we cannot remain silent and allow a young and unsophisticated maiden to be imposed upon. Bob Anderson is not a Narcissus. He never took a prize at any beauty contest.

PROMOTER.

IN BOTTLE TOPS FOR MUDDY FEET

What becomes of the crimped tin tops used on beer bottles, pop bottles, catnip bottles and the like? In most houses they are thrown into the ash barrel—but there are a few places in the world where they are put to a much better use. And it might be that your home is waiting for something of this kind. Tin bottle tops

are the finest antidote in existence for muddy feet. They prevent muddy feet from entering the house by taking the mud from the feet. An excellent foot scraper can be made by simply nailing 10 or a hundred of the bottle tops on a board with the crimped edges up. The board can be suitably covered with them. An ordinary inch plank will do and carpet tacks can be used to attach the bottle tops.

HERE IS ANOTHER USE FOR THE MILK BOTTLE

How It May be Made to Tell the Weight of Your Letter

It is a great bore to have a letter in the mail and not know how many stamps it will require to get it to the post office. It is a great convenience and it is much cheaper to make one than buy it. They are easily made, too. All that is necessary is a milk bottle or other well-shaped bottle and a piece of broom stick, a lead weight and a flat piece

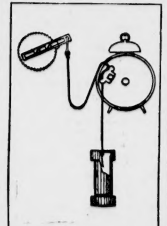

of tin. The broom stick is made of convenient size to fit into the bottle and not go quite to the bottom. The structure is made as shown in the sketch, with the stick attached to the bottom of the bottle. The bottle is filled with water. With the stick fixed in the bottle as shown, a set of known weights are placed on the top and the graduations of the scale marked on the stick as the weights are put down into the bottle. Care should be taken to see that the weight is just heavy enough to hold the stick about half way down the bottle, so that plenty of room is given for the weighing of the scales with the letters. If some of the water escaped by evaporation, more should be added to keep the stick at a uniform level.

CLOCK OPERATES VALVES

Time Mechanism Operates Them and Operates Clocks, Etc.

A time mechanism for the operation of valves, switches and the like has

CLOCK RELEASES WEIGHT.

been invented. A notched wheel is attached to the object to be operated and a lever is pivoted to this wheel. The lever is in two parts rigidly connected so that the length may be adjusted as required. A cord attached to the free end of the lever has a weight at its other end. This weight is lightly wound around the key of an alarm clock and suspends the lever on the latter. When the alarm goes off the key revolves and throws off the cord which allows the weight to drop and exert a downward pull on the lever. This in turn operates the mechanism which opens the valve, switch, or whatever it is to be opened. The same principle can be applied to a furnace door.

OVERSHOES AND MITTENS FOR MEN AND BOYS

The People in Strathmore Want to Spend Money

MONEY is for use, not for hoarding. Most of us want what money will buy more than money, so we are always spending our money. Also most of us do not make enough money to keep or hoard it—we must spend it on necessities

Much Strathmore money is spent with firms outside of this community—the big city mail-order houses; money that ought to be spent at home. The mail-order houses get their business entirely through advertising

More money would be spent in Strathmore if more of our merchants would advertise, and if those who do would advertise more

To the People in and About Strathmore

Spend your money in Strathmore. Sending money out of this community makes the community poorer for you and everybody else. Building up outside businesses won't help you any.

Favor Goes to Those Who Woo It
